PulseIQ Phase 2 Report

Name: Poonam Satish Patole

Track: Data Analysts

Phase: Phase 2

Prepared: 30 October 2026

GitHub repository: PoonamPatole/pulseiq

Git tag: Phase-2

Task status and evidence

Task	Status	Evidence
6. Attendance and leave	Complete locally; corrected monthly rate uses M13 half-day adjustment.	attendance observations
7. Attrition analytics	Complete locally; actual exits and grouped risk are separate; small groups suppressed.	three recorded findings
8. Team productivity	Complete locally; delivery metrics and two manual velocity checks match.	two-team manual verification
9. Payroll cost and reconciliation	Complete locally; figures provisional pending Finance review of five differences and duplicate/orphan records.	five-month reconciliation
10. Budget and KPI targets	Complete locally; variance, KPI status and three hand checks documented.	three manual variance checks

Proof it works

- **Task 6:** Corrected M13 all-department rates: May 2026 92.89%, January 2026 93.29%, April 2026 93.35%; the numerator includes half of unpaid half-days.
- **Task 7:** Largest selected exit rows: Engineering (Mar 2025), 5 / 3.40%; Operations & IT (Mar 2024), 4 / 13.79%; Engineering (Mar 2020), 3 / 5.17%. Tenure uses the SCD row valid at exit.
- **Task 8:** SP-01 checks matched: Analytics & BI, 22 completed tasks / 79 points; Data Platform, 29 / 72.
- **Task 9:** Payroll figures remain provisional pending Finance review. DQ-C01 reports five payroll-to-ledger differences; June 2026 is -INR 18,450; four other months remain under investigation. Duplicate employee/run rows and unmatched IDs also remain unresolved. No rows were excluded.
- **Task 10:** April 2025 hand checks matched: Engineering -INR 1,911,891.25 (-8.19%); Product & Design -INR 461,307.33 (-8.73%); Data & AI -INR 100,184.00 (-1.32%). Negative means underspend.

All five Streamlit apps passed a local AppTest smoke run with no app exceptions; Python compile checks passed. Numeric spot checks are recorded with task evidence.

What I learned

Attendance and leave can have different grains, so leave needs a company-wide caveat. Actual exits and modelled risk answer different questions. Team velocity needs completed-task checks and sprint context. Payroll and budget comparisons need clear sign conventions, traceable sources, and visible uncertainty.

Problems and how I handled them

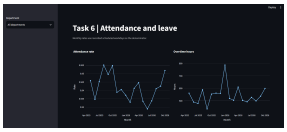

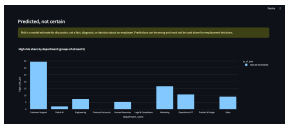

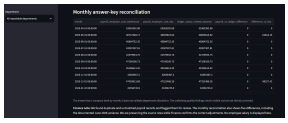

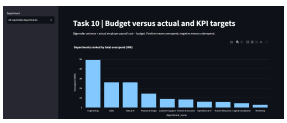

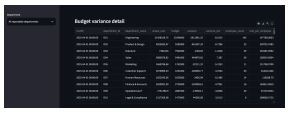

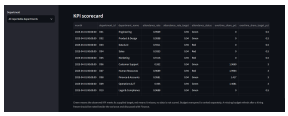

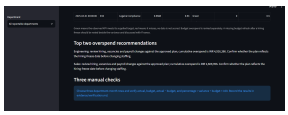

The attendance feed cannot reliably label long weekends, so holidays are context, not cause. Attrition predictions are grouped and suppress groups below five. Payroll has duplicate employee/run groups, orphan IDs, and five mismatches; I preserved rows and documented differences for review. The answer key is company-level and cannot validate department allocation. Three budget rows were checked by hand.

Plan for the next phase

Prepare a shareable deployment, check access from another device, and complete release materials and a demo. Keep payroll exceptions visible until Finance confirms corrections. Commit the final phase files, apply the Phase-2 tag, and record the release reference.
